

PROFESSIONAL SUMMARY

Backend and distributed systems engineer with **6+ years of experience** building scalable, high-availability platforms and real-time communication systems for 200k+ users in startup environments. Specialized in Python/Django, asynchronous processing, event-driven architectures, PostgreSQL optimization, Redis, RabbitMQ, and AWS infrastructure. Experienced in leading engineering teams, architecting scalable systems, and owning backend platforms end-to-end.

KEY ACHIEVEMENTS

- Built and scaled real-time chat infrastructure supporting 200k+ users.
- Reduced infrastructure costs by 25% through multi-tenant backend architecture.
- Led and mentored 15+ engineers across backend and mobile teams.
- Improved repayment compliance by 20% using asynchronous workflow systems.
- Recognized as IndiaQuotient 30 Under 30 Awardee (2024).

SKILLS

- Backend: Python, Django, Microservices, Async Processing (Celery), REST APIs, Redis
- Messaging: RabbitMQ, MQTT, Event-Driven Architectures, EMQX
- Databases: PostgreSQL (schema design, indexing, optimization)
- Cloud/DevOps: AWS (EC2, RDS, S3, CloudWatch), Docker, Jenkins, CI/CD, Sonar, Grafana, Prometheus
- Frontend & Mobile: JavaScript, React-Native, React.js, Redux, HTML, CSS
- Productivity & Tools: Flipper, Amplitude, Sentry, Git, Firebase

PROFESSIONAL EXPERIENCE

Co-founder & Backend Engineer at CREWMINT (Early-stage), Bengaluru December 2025 – April 2026

- Designed and developed an MVP for a field operations and workforce management platform focused on operational visibility and workflow automation.
- Architected backend services and cloud infrastructure using Django, PostgreSQL, Redis, and AWS.
- Developed scalable workflows for field team tracking, task management, reporting, and operational analytics.
- Led product engineering, technical decision-making, and rapid iteration based on customer feedback.

Senior Software Engineer (Founding Engineer) at KOSH, Gurugram August 2019 – November 2025

Backend Engineering & System Design

- Architected and implemented a **multi-tenant distributed backend system** for an in-house chat SaaS product, improving scalability and reducing infrastructure costs by **25%**.
- Designed Python/Django-based **microservices** for authentication, workflow automation, messaging, and third-party integrations.
- Built **tenant SSO** platform, reducing login issues by **40%** and improving user onboarding.
- Led end-to-end system design (**HLD/LLD**), **API design**, and system component architecture for chat, workflow automation, job application, and referral systems.
- Engineered real-time chat infrastructure handling **200k+ users** with MQTT/RabbitMQ and distributed workers.
- Developed an **Automated Recovery Calls system**, improving loan recovery rates by **18%** and reducing manual efforts by **50%**.
- Built **asynchronous reminder workflows** (IVR/SMS/WhatsApp) using Celery and queues, improving repayment compliance by **20%**.
- Practiced **Test-Driven Development (TDD)** by writing unit tests before feature implementation, ensuring high code reliability and reduced regression defects.
- Set up CI/CD pipelines via **Docker + Jenkins**, ensuring reliable, automated deployments.
- Optimized PostgreSQL schema design, indexing, and query performance for high-traffic services.
- Implemented Redis-based caching, load balancing, and API rate limiting to improve system performance, ensure high availability, and handle high-traffic workloads efficiently.

Technical Leadership

- Owned backend platform from **architecture, development, deployment, monitoring, maintenance, and iterative improvements**.
- Led architecture decisions, conducted code reviews, sprint planning, and mentored a team of **15+ engineers**.
- Collaborated with frontend, DevOps, product managers, and external API partners to deliver scalable solutions.
- Conducted technical onboarding and continuous coaching to improve engineering standards and productivity.

Frontend & Mobile Engineering

- Designed and deployed scalable **mobile and web applications** via React Native and React.js, including a customer-facing app with **100k+ downloads and a 4.5-star Play Store rating**.
- Enhanced **Gifted-Chat** by integrating advanced features, including multimedia sharing, live location, URL previews, user mentions, and message pinning, resulting in a **50% increase in user engagement**.
- Integrated **MQTT** for live chat with **offline-first capabilities** and flawless data synchronization.
- Seamlessly integrated **third-party SDKs** such as **Sentry for error monitoring** and **Amplitude for analytics**, achieving a **98% crash-free app experience**.

INTEGRATIONS & APIS

- Cashfree Payment Gateway/ Payouts/ AutoCollect, Pusher Web-Sockets, LotusPay E-NACH, CIBIL, Equifax, CRIF, GupShup WhatsApp Messaging, Setu UPI Deeplink, OneFin e-signature, Location IQ, TeleCMI, MyOperator, MSwath

EDUCATION

- Bachelor of Engineering (CSE) Shri Shankaracharya Technical Campus | 2015 - 2019

OPEN-SOURCE CONTRIBUTION

- Created and published an **open-source React Native library** on NPM, enabling seamless UPI payment integration for mobile apps ([react-native-upi-pay](#)).
- **Personal GitHub:** [github.com/falendra/](#)
- **Work GitHub:** [github.com/falendra-kosh/](#) (Private repositories at [KOSH](#))
- **Portfolio:** [falendra.dev](#)

AWARDS & RECOGNITION

- **Recognized** by [IndiaQuotient](#) as one of their **30 Under 30** awardees 2024, celebrating exceptional talent and contributions across their portfolio.
