

Professional Summary

Senior Software Engineer with **6.3+ years of experience** building scalable, high-performance backend systems and user-centric frontend applications. Specialized in **Python/Django backend development, microservices, asynchronous processing, PostgreSQL, and AWS deployments**. Equally strong in **React Native and React.js**, having delivered production-grade mobile and web applications. Proven track record of **leading and mentoring teams of 15+ engineers** while owning services end-to-end, from architecture and design to development, deployment, and observability, while driving technical decisions that improve system scalability, reliability, and user experience.

Education

- Bachelor of Engineering (CSE) Shri Shankaracharya Technical Campus | 2015 - 2019

Skills

- backend: Python, Django, Microservices, Async Processing (Celery), REST APIs, Redis
- Messaging: RabbitMQ, MQTT, Event-Driven Architectures, EMQX
- Databases: PostgreSQL (schema design, indexing, optimization)
- Cloud/DevOps: AWS (EC2, RDS, S3, CloudWatch), Docker, Jenkins, CI/CD, Sonar, Grafana, Prometheus
- Frontend & Mobile : JavaScript, React-Native, React.js, Redux, Realm, Android (Java basic)
- Productivity & Tools: GiftedChat, Material UI, Figma, Flipper, Amplitude, Sentry, RN debugger, GIT, Firebase

Professional Experience

Senior Software Engineer (Founding Engineer) at KOSH, Gurugram August 2019 – November 2025

Backend Engineering & System Design

- Architected and implemented a **multi-tenant distributed backend system** for an in-house chat SaaS product, improving scalability and reducing infrastructure costs by **25%**.
- Designed Python/Django-based **microservices** for authentication, workflow automation, messaging, and third-party integrations.
- Built **tenant SSO** platform, reducing login issues by **40%** and improving user onboarding.
- Led **HLD/LLD, API design**, and system component architecture for chat, workflow automation, job application, and referral systems.
- Engineered real-time chat infrastructure handling **200,000+ users** with MQTT/RabbitMQ and distributed workers.
- Developed an **Automated Recovery Calls system**, improving loan recovery rates by **18%** and reducing manual efforts by **50%**.
- Built **asynchronous reminder workflows** (IVR/SMS/WhatsApp) using Celery and queues, improving repayment compliance by **20%**.
- Automated third-party promotional message scheduling via event-driven pipelines, boosting engagement by **25%**.
- Integrated **Redmine task management** into chat, improving project tracking efficiency by **30%**.
- Developed backend services for **lead generation and referral workflows**, increasing user acquisition by **30%**.
- Built **“easy apply”** job application flows inside chat, increasing application conversion rates by **50%**.
- Implemented **live location tracking microservices**, improving field team productivity and operational visibility.
- Deployed and operated backend services on **AWS (EC2, RDS, S3)** with high availability and fault tolerance.
- Set up CI/CD pipelines via **Docker + Jenkins**, ensuring reliable, automated deployments.
- Optimized PostgreSQL schema design, indexing, and query performance for high-traffic services.
- Implemented Redis-based caching, load balancing, and API rate limiting to improve system performance, ensure high availability, and handle high-traffic workloads efficiently.

Technical Leadership

- Owned backend platform from **architecture → development → deployment → monitoring → iteration**.
- Led architecture decisions, conducted code reviews, sprint planning, and mentored a team of **15+ engineers**.
- Collaborated with frontend, DevOps, product managers, and external API partners to deliver scalable solutions.
- Conducted technical onboarding and continuous coaching to improve engineering standards and productivity.

Frontend

- Designed and deployed scalable **mobile and web applications** via React Native and React.js, including a customer-facing app with **100k+ downloads and a 4.5-star Play Store rating**.
- **Developed a pixel-perfect loan journey UI** supporting **multi-document uploads, performant video recording, and intelligent input fields** to streamline the user KYC process.
- Developed an advanced **in-app chat system supporting personal, bot, and public channels**, designed to seamlessly handle **200,000+ users**.
- Enhanced **Gifted-Chat** by integrating advanced features, including multimedia sharing, live location, URL previews, user mentions, and message pinning, resulting in a **50% increase in user engagement**.
- Integrated **MQTT** for live chat with **offline-first capabilities** and flawless data synchronization.
- Secured login systems with **unique device authentication** and **Google Recaptcha v2 & v3**, significantly reducing fraud incidents.
- Seamlessly integrated **third-party SDKs** such as **Sentry for error monitoring** and **Amplitude for analytics**, achieving a **98% crash-free app experience**.
- Developed **reusable components, front-end libraries, and deep linking**, enhancing both **scalability and development efficiency**.

Integrations & APIs

- Cashfree Payment Gateway/ Payouts/ AutoCollect , Pusher Web-Sockets, LotusPay E-NACH, CIBIL, Equifax, CRIF, GupShup WhatsApp Messaging, Setu UPI Deeplink, OneFin e-signature, Location IQ, TeleCMI, MyOperator, MSwasth

Open-Source Contribution

- Created and published an **open-source React Native library** on NPM, enabling seamless UPI payment integration for mobile apps ([react-native-upi-pay](#)) .
- **Personal GitHub:** [github.com/falendra/](#)
- **Work GitHub:** [github.com/falendra-kosh/](#) (Private repositories at [KOSH](#))
- **Portfolio:** [falendra.dev](#)

Awards & Recognition

- **Recognized by [IndiaQuotient](#)** as one of their **30 Under 30** awardees 2024, celebrating exceptional talent and contributions across their portfolio.
